SUMMARY

Software Engineer with experience in backend development using Go, PostgreSQL, Docker, and Kubernetes. Experienced in developing sandbox management, snapshot and restore workflows, resource and quota management, networking, and platform APIs. Strong foundation in data structures, databases, and distributed systems, with a focus on developing reliable and scalable software.

Technical Skills

- **Programming Languages:** Go, Java, C, JavaScript, SQL
- **Backend Development:** Node.js, REST APIs, PostgreSQL, MySQL
- **Frontend Development:** React, Next.js, HTML, Tailwind CSS
- **Cloud Infrastructure:** Kubernetes, Docker, Linux, Firebase
- **Developer Tools:** Git, GitHub, Postman, VS Code
- **Computer Science:** Data Structures Algorithms, Object-Oriented Programming, Operating Systems, DBMS

Experience

Software Engineer I – NeevCloud

April 2026 - Present

- Designed and implemented **full memory snapshot and restore workflows for sandboxes**, using gVisor **runsc checkpoint** and a Kubernetes-based snapshot operator with shared storage to enable stateful pause, restore, and rollback across nodes.
- Enhanced sandbox networking and **resource management with template-based network egress policies**, dynamic CPU/memory resizing, and simplified sandbox connection APIs.
- Designed and implemented **BYOT (Bring Your Own Template)** functionality, including CRUD APIs, schema migrations, validation mechanisms, and organization-level template uniqueness.
- Built **centralized resource quota management** and synchronization systems, enabling unified quota validation and resource usage tracking across organizations and projects.

Intern – NeevCloud

Aug 2025 - March 2026

- Conducted end-to-end testing across platform services and improved the E2E test suite by providing detailed error messages for faster debugging and issue resolution.
- Implemented **audit logging across platform** services to improve traceability and monitoring of system operations.
- Implemented **dynamic region fetching and configuration management** using shared services and Kubernetes ConfigMaps.
- Implemented **UTM parameter** tracking for campaign experience to enhance user analytics and marketing insights.
- Built the Audit Logs UI from Figma designs and integrated it with backend APIs to display real-time system events, with filters for event type, date range, and search.

Product Intern – Souloxy (Mental Well-being Startup)

Feb 2025- July 2025

- **Authentication System:** Designed and implemented a secure, role-based authentication system using **Firebase**, **React**, and **Node.js**, enabling seamless access control for both users and administrators.
- **Admin Dashboard:** Developed a responsive and interactive admin dashboard for managing wellness services, significantly reducing manual workflows and enhancing operational efficiency.
- **Email Notification System:** Built real-time email notification system using **SendGrid**, achieving sub-5-second delivery and an automated retry strategy that improved overall delivery success rate by over **90%**.
- **Agile Development:** Actively contributed in an agile, startup-like environment, gaining hands-on experience in iterative development and building technology-driven mental health solutions.

Projects

Smart Learn and Career AI

March 2026

- **Tech Stack:** Next.js, PostgreSQL, Prisma, NLP Transformers
- Developed a full-stack document intelligence platform to extract, analyze, and synthesize structured data from multi-format files (PDF, DOCX, TXT) using Node.js and Next.js API routes.
- Implemented local semantic processing by generating vector embeddings using **all-MiniLM-L6-v2**, enabling real-time resume-to-job matching without external API dependency.
- Engineered an automated study kit generator that uses NLP to extract key concepts from documents, creating executive summaries, interactive quizzes, and flashcards.
- Built a career alignment tool that calculates **cosine similarity** between resumes and job descriptions to provide automated ATS optimization tips and skill gap reports.

AI Chatbot

Feb 2025

- Developed a full-stack AI-powered Q&A platform using React and Node.js, supporting uploads of multiple file types (up to 20MB across 5 files).
- Integrated a complete RAG pipeline with LangChain, OllamaEmbeddings (nomic-embed-text), and LLaMA 3, using MemoryVectorStore for fast in-memory retrieval.
- Architected a zero-database system using Multer, pdf-parse, and mammoth to improve response time and reduce infrastructure complexity.
- Implemented recursive chunking and async processing to efficiently handle large files with minimal latency.

Education

Gayatri Vidya Parishad College of Engineering
B.Tech in Computer Science and Engineering

2022 – 2026
CGPA: 9.4

Roles & Leadership

National Service Scheme (NSS), GVPCE — Event Management Lead

2023–Present

- Led organization and execution of large-scale outreach programs, including awareness rallies and community cleanup drives.
- Leading strategic planning and volunteer management efforts impacting hundreds of participants

Rotaract Club, GVP — Volunteer

2023–2024

- Fostered teamwork and community engagement through collaborative efforts.
